In addition to our normal inventory of new equipment for sale, **airandvac.com** offers rental and standby equipment designed to see you through an emergency, construction, short or long term temporary situation. Our rental fleet carries a full range of medical air and vacuum systems or our space saver systems can be assembled on site to fit your room size and configuration. Accessories such as control modules, filter packages, carbon monoxide or dewpoint monitors, drying equipment and alarms are also available for rent or lease.

Each air and vacuum application is different. Our trained professionals will consult with your facility management to determine the parameters and requirements necessary to provide the proper equipment to meet your application. Once your requirements have been accessed, a pre-plumbed, pre-wired and tested system can be delivered, installed and calibrated on-site to get you up and running as efficiently and cost effectively as possible.

Why Would My Facility Need a Rental or Standby System?

There are dozens of situations that could make a medical air or vacuum rental or standby system necessary or attractive. For example:

- > An emergency with current equipment,
- > Changes or additions to your facility,
- > Current equipment cannot keep up,
- > Non-compliance or non-redundancy,
- > Need a standby during construction,
- > Upgrade without shutting down the system,
- > Cannot shut down for needed repairs,
- > Getting by during repair or replacement,
- > Temporary cash flow situations.

Rentals are available on payment, lease or lease-to-own schedules that can be tailored to fit your individual situation.

airandvac.com is a nationally recognized air compressor and vacuum pump company specializing in NFPA compliant compressed air and vacuum systems for all medical and specialty applications. We offer facility and equipment consultation, evaluation, planning and engineering assistance as well as equipment and system sales, service, repairs and maintenance. Our Preventative Maintenance Programs are designed to keep your facility running as efficiently as possible.
